NAME: NICOLE A. MAQUINANA COURSE YEAR&SECTION: BSIS 2B

LABORATORY REPORT; BUILDING AN HTML5 WEB PAGE

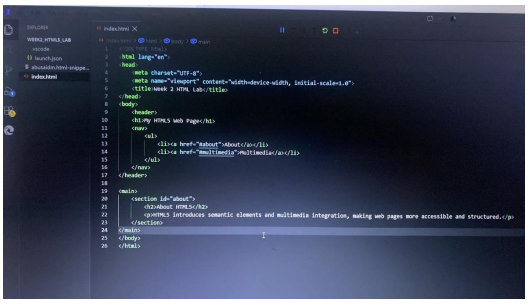

STEP 1: Creating the Basic Structure of the Web Page

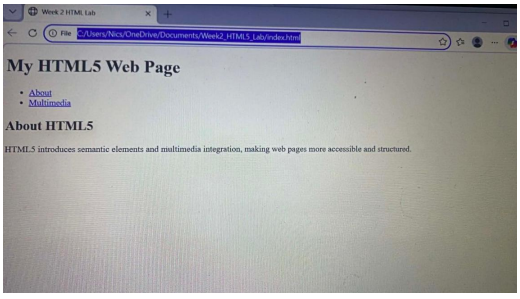

Description: In this step, I created the foundational structure of my HTML5 web page, which serves as the backbone of the entire site. I started by setting up the standard HTML5 document structure including the `<!DOCTYPE html>` declaration, `<html>`, `<head>`, and `<body>` tags and defined the page title and character set.

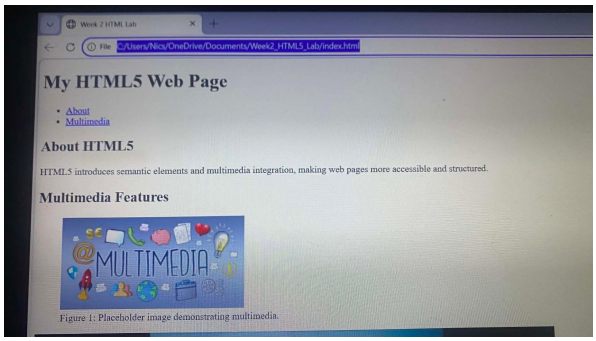

STEP 2: Writing the Main Section about HTML 5

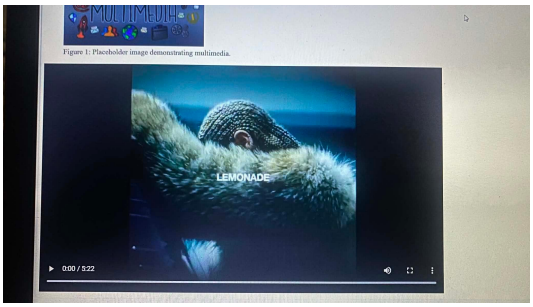

Description: For this step, I worked on building the main content part of my web page using HTML5. I started with the `<main>` tag, which holds the most important content of the page.

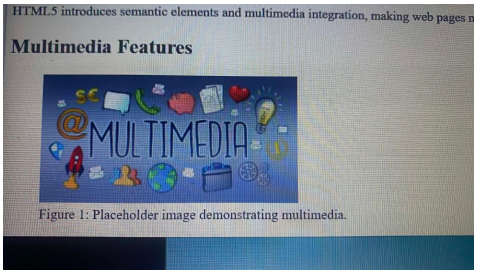

STEP 3: Adding Multi Media Features

Description: For Step 3, I added multimedia features to my website to make it more interesting and interactive. I included images, videos, and audio using HTML5 elements. These features help make the content easier to understand and more engaging for users. I also used Visual Studio Code to add and organize the multimedia elements in my webpage.

STEP 4: ADDING A FOOTER

Description: Lastly I added a footer section at the bottom of my page.

STEP 5; Final Rendered Web Page

Description: The final rendered web page shows the completed website after applying all the HTML, CSS, and multimedia features. It presents the finished design, layout, images, videos, and other elements as they would appear to the user in a web browser.

Overall, this activity helped me understand how to create and design a webpage using HTML, CSS, and multimedia features. I was able to apply what I learned and see the final result as a complete and functional web page.

REFLECTION: In this activity, I learned how to create a simple web page step by step. First, I prepared my workspace and organized the files needed for the project. Then, I created the HTML structure and added a semantic header and main section to organize the content properly. I also added multimedia content such as images or videos to make the web page more interesting. Lastly, I added a footer and tested my web page to make sure everything was working correctly. Overall, this activity helped me understand the basic structure of HTML and improved my skills in creating a simple and organized web page.
